Training Orchestra | Training Management Software

Improve your company's performance

Training Orchestra is based on industry best practices and experience with over 250 clients worldwide

CHALLENGE

To offer the best quality of service to their clients, training companies need to ensure efficient and smooth collaboration between all employees from sales representatives and administrative support to trainers. Yet, our experience shows that organizations often mix different tools (CRM, spreadsheets…) which do not scale into a growing organization. The use of unadapted software slows down productivity while the implementation of a dedicated management tool would help to address the current performance needs and drive an efficient training operation.

Training Orchestra is the ideal solution to increase your training business and enhance operational processes. By increasing client loyalty and optimizing the use of resources, Training Orchestra actively contributes to your company's profitability.

BENEFITS

Dedicated training ERP to enhance revenue, client service and improve customer loyalty, available SaaS or on premise
